

The Librarians Setup

1. Clone the repository to your local machine using the 'git clone' command.
2. Navigate to the project directory and create a virtual environment by running the command 'python -m venv venv'.
3. Activate the virtual environment by running 'source venv/bin/activate' (for Linux or Mac) or 'venv\Scripts\activate' (for Windows).
4. Install the required dependencies by running 'pip install -r requirements.txt'.
5. In your web browser, navigate to <http://localhost:5000/initdb> to initialize the database. You should see a message indicating that the database has been initialized.
6. You're now ready to use the Flask app. In your web browser, navigate to <http://localhost:5000> to view the home page. From there, you can navigate to the other pages of the app, create an account, and generate a children's book based on your input.
